

## OUTBACK SKY JOURNEYS – BROCHURE COPY

### 50 WORDS

Explore the vast night landscapes with the use of telescopes. Learn how stars are formed, why they produce light, the lifecycle of a star, the theory of “the Big Bang”, and much more. Our resident astronomer guides guests through the evolution of the Universe and a journey through the southern night sky.

### 100 WORDS

The Australian Outback is perhaps one of the best places to explore the galaxy of stars in the night sky.

Take a moment to explore the vast night landscape with the use of telescopes. Learn how stars are formed, why they produce light, the lifecycle of a star, the theory of “the Big Bang”, and much more. This stargazing tour will take you on a fact-finding journey through the southern night sky, enhancing your knowledge on astronomy and its beginnings. Don’t miss out on this amazing opportunity to have your questions answered in an Australian outback classroom.
